Scenarios, opportunities and risks

6. GROWTH SCENARIOS

Insufficient evidence to estimate for every corridor and property type: no cell has appreciation evidence from ≥2 independent original sources (media relaying the same research house count once). Formula when estimable: $FV = P \times (1 + g)^{years}$; base = 0.8 × historical median CAGR, capped at 12.0%, real after 4.5% inflation.

7. OPPORTUNITIES TO INVESTIGATE

No corridor/property type met the evidence threshold (≥3 evidenced factors). Nothing is ranked rather than ranking on thin data.

8. RISKS, CONTRADICTIONS AND UNVERIFIED CLAIMS

Method: claims carry URL, verbatim excerpt, publication/event dates and retrieval time; statuses are set by code (official → verified; ≥2 independent original sources → corroborated; one reputable source → single source; developers, brokers, portals, consultancies and influencers → interested party). Guarantee language, failed citation checks and failed or split independent reviews force ‘unverified’.
